

1. AI is the field of artificial intelligence which deals with the creation of intelligent algorithms which can mimic human way of learning.
2. Machine learning is the subset of Artificial Intelligence which deals with learning algorithms which can learn from patterns in data and make predictions by themselves.
3. Deep learning is the field of AI which mimicks the function of human brain neurons using neural network.
4. Computer Vision is a field of Deep Learning which focuses on recognition, detection of certain images.
